

THIS WEEK'S WORDS

GRADE 3

run	달리다	fly	날다
jump	뛰다 (점프하다)	ski	스키를 타다
sing	노래를 부르다	hike	등산하다
dance	춤을 추다	ride	타다
swim	수영하다	bike	자전거
skate	스케이트를 타다	use	사용하다

GRADE 4

bag	가방	school	학교
umbrella	우산	bed	침대
watch	손목시계	time	시간
notebook	공책	for	~을 위한
breakfast	아침 식사	morning	아침
lunch	점심 식사	afternoon	오후
dinner	저녁 식사	evening	저녁

GRADE 5

bathroom	욕실 / 화장실	lamp	램프
bathtub	욕조	living room	거실
bed	침대	mirror	거울
bedroom	침실	remote control	리모컨
bookcase	책장	room	방
chair	의자	sink	싱크대
clothing room	옷방 / 드레스룸	sofa	소파
cookie	쿠키	stove	스토브 / 가스레인지
desk	책상	study	서재
kitchen	부엌 / 주방	table	테이블 / 식탁

GRADE 6

bag	가방	hamburger	햄버거
board game	보드 게임	interesting	흥미로운
book	책	jacket	재킷
boring	지루한	looks ~	~처럼 보인다
cap	모자	movie	영화
cheap	싼	phone	전화 / 휴대폰
computer game	컴퓨터 게임	play	놀다
expensive	비싼	scary	무서운
fast food	패스트푸드	T-shirt	티셔츠
fun	재미있는	think	생각하다
game	게임	watch	시계

AI assisant

by Aidan

AI assistants are computer programs that can understand and respond to human languages. These days they are becoming very common and they help people with many day-to-day tasks. They can write e-mails, answers questions, create stories and even generate images and videos. They are not perfect and still make many mistakes but they are getting better very quickly. In the past, phone assistants like Siri and Bixby were popular but not very useful. But these days we have ChatGPT, Gemini, Grok and many more. ChatGPT is famous for its conversational abilities. Gemini is known for its image and video generation abilities. Grok is known for its unique and humorous personality. For now, each AI assistant is good at different things. Gemini is great for creating images. ChatGPT is good for talking to. Grok specializes in creating fun and interesting videos. In the future, AI assistants will be even more powerful. Do you use an AI assistant?

Four major AI assistants

Is this the future?

WORDS

ability	능력	humorous	유머러스한
assistant	도우미	personality	성격
common	흔한	popular	인기 있는
conversational	대화의	respond	응답하다
generate	생성하다	useful	유용한

CULTURE

Artificial Intelligence by Aidan ★★★★★

Artificial intelligence, or AI, is when computers can think and learn like people. It's like giving a computer a very smart brain! AI helps us in many ways every day. Your phone uses AI to know your face or hear what you say. It makes games better and helps cars drive safely. AI can also help doctors look at pictures to find problems. When you search for things on the internet, AI helps you to find what you want. It's a big part of our modern world and helps make many things easier for everyone.

AI is like machines that think

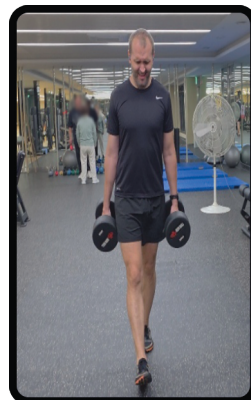

WORDS			
artificial	인공적인	modern	현대의
brain	뇌	safely	안전하게
doctor	의사	search	검색하다
intelligence	지능	technology	기술

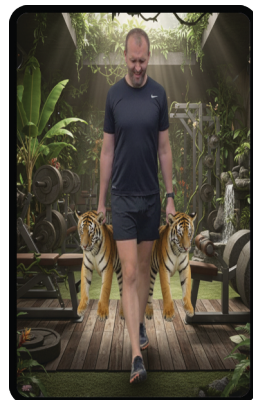

CULTURE

AI images by Aidan ★★★★★

AI images are pictures made by computers that use artificial intelligence. It's like telling a smart computer what you want to see and it draws it for you! People make them by writing a text description, for example, "a cat wearing a hat." Then, the AI program uses this text to create a unique image. You don't need to be an artist to make beautiful pictures anymore. AI images are used for many things. Artists use them for inspiration, businesses use them for advertising, and sometimes people just make them for fun or to share online.

AI video generation by Aidan ★★★★★

Did you know that you can use AI to generate videos? When this ability was first introduced it looked ridiculous. The people in the videos looked like humans but they moved in strange and unsettling ways. We call this feeling the "uncanny valley." It is used to describe the feeling of unease or disgust you get when watching a character that looks almost human but isn't quite human. These days, however, AI generated video is improving in leaps and bounds. You can even take pictures of your own and make yourself do amazing things. The more unsettling fact, that is less often discussed, is that you can take pictures of other people and make *them* do funny things too. These videos are often called "deep fakes." This is why people should not post too many pictures of themselves on social media platforms like KakaoTalk and Instagram. AI video generation is certainly a fun and powerful tool but it is far from perfect and you should always be aware of the risks associated with having an online presence.

I like Le Sserafim's music

Wow, thanks fake Le Sserafim!

Ahn Yujin is my favorite idol

Oh, thank you Not-Ahn Yujin!

Not-teacher... what are you doing!?

WORDS			
associated	관련된	platform	플랫폼
certainly	확실히	presence	존재
disgust	혐오감	ridiculous	우스꽝스러운
especially	특히	uncanny	이상한
introduce	도입되다	unease	불안감 / 불편함
